

# Dedicated Servers

Data Sheet

## Powerful Dedicated Servers

Dedicated servers give you total freedom to use your server in any way you want, and install any software, applications or scripts you need.

“Advanced dedicated server technology built to the highest specification backed by Dell and HP technology.”

Shared hosting is simply not designed for large websites or mission critical websites. Without the platform and infrastructure to cope with demanding levels of traffic and downloads, how can your business grow? Because you have sole access to the dedicated server and do not share any resources with other users, they offer hugely superior performance and flexibility.

Your server comes with a 100mbps (with optional 1Gbps available) connection to the Internet; it's just like having your own leased line.

You can transfer as much data as you like within your 100mbps/1Gbps line. Don't get this confused with your broadband at home or work; you don't share your 100mbps/1Gbps with anyone else. 100mbps/1Gbps is a huge amount of bandwidth which can support a very busy website. It roughly translates to over 25600 GB of bandwidth a month

## Key Benefits

### The latest server technology

We have advanced dedicated server technology built to the highest specification and backed by Dell and HP technology. All our dedicated servers are set up with RAID mirroring, and in the unlikely event of a disk failure, this means your dedicated server will continue to operate normally.

### It is your server

As long as anything you do on the server abides with UK law, then you are free to use the server for any purpose you see fit. It is yours after all.

### 99.99% uptime guarantee

We know that your server is an important part of your business, so every Dedicated Server we sell comes with a comprehensive Service Level Agreement.

## Features and Specifications

Our dedicated servers offer outstanding performance for even the most demanding of websites with the latest Intel and HP technology combining unparalleled server specification, bandwidth, and service with a low monthly fee.

Operating System	<i>Your specification</i>
Server Memory (RAM)	<i>Your specification</i>
Server Hard Drive	<i>Your specification</i>
RAID	Software / Hardware
Remote Server Reboot	✓
Unlimited Bandwidth	✓
Root System Access	✓
Free IP Addresses	1
cPanel/WHM 11.50	Optional
Server Back-Ups	Optional

## **Dedicated Server FAQs**

### **What type of hardware do you use?**

All our servers are genuine Dell or HP Servers. If you are comparing us to other providers, please be aware that many companies make “homemade” servers using home computer motherboards in fabricated boxes.

### **What level of access do I have to my server?**

You will have full root or administrator privileges to manage and access your server.

### **Is there any software installed on the server to help me configure it?**

If you have chosen CentOS 6, Debian, or Ubuntu 12.04 LTS we can offer Plesk. If you want the easiest management possible, and have chosen CentOS 6, then we can offer cPanel.

### **Can I use my server to host videos, stream audio, or store large backups?**

Yes, you can use your server for any purpose you need, as long as it abides with UK law.

### **Does the server run RAID disk mirroring?**

Yes, all our servers are set up with RAID mirroring. In the unlikely event of a disk failure this means your server will continue to operate normally. We will be notified of the disk failure and will replace the broken disk for you with no cost or impact to your data or service.
